

Elysian Field Farms LLC: Pioneering Veganic Agriculture

“Eat Clean, Grow Veganically”

Introduction:

Elysian Field Farms LLC, located in Arlington, Washington, is at the forefront of sustainable agriculture, specializing in Veganic farming—a method that utilizes 100% plant-based nutrients to cultivate healthy, robust crops while enhancing soil vitality.

Mission:

Our mission is to revolutionize agriculture by pioneering the way for Veganic produce and Veganic soil solutions. By exclusively using plant-based nutrients enriched with microbial life, we not only recycle and rejuvenate the soil but also eliminate risks associated with animal-derived fertilizers, such as salmonella and other pathogens.

Environmental Stewardship:

In collaboration with the Department of Conservation, we have undertaken initiatives to plant near-extinct cedar trees along the Stillaguamish River. These trees play a crucial role in stabilizing riverbanks, effectively mitigating erosion and transforming previously flood-prone areas into fertile farmland.

Additionally, we are actively involved in restoration projects with wildlife and fisheries organizations to replenish trout and salmon populations directly into the Stillaguamish River. These efforts are part of a broader strategy to restore watershed processes and improve salmon populations in the region.

Our Team:

- *Charles Harvey, Jr.:* As Founder, Charles leads with a vision rooted in sustainable and ethical farming practices.
- *Steven Spruel:* Our Veganic Chemist, Steven, develops nutrient blends that foster plant health without relying on animal products.
- *Kirk Mathis:* As Marketing and Branding Director, Kirk oversees all creative endeavors for both Elysian Field Farms and 4 Releaf, ensuring cohesive and impactful messaging.

Our Promise:

At Elysian Field Farms, we pledge to provide produce that is not only flavorful and nutrient-dense but also cultivated with the utmost respect for the environment. By avoiding animal-derived inputs, we offer cleaner, purer products free from harmful metals, pesticides, and salts.
